PROFESSIONAL SUMMARY

Oracle Cloud Technical Consultant with hands-on experience designing, developing, testing and supporting Oracle Integration Cloud (OIC) integrations, Oracle ERP/Fusion Cloud solutions and VBCS applications across Finance, SCM and WMS processes. Skilled in REST and SOAP web services, FBDI, BI Publisher (BIP), SQL, PL/SQL, ORDS, SFTP and file-based integration patterns, with end-to-end SDLC delivery from requirements and technical design through UAT, deployment and post-production support.

TECHNICAL SKILLS

Oracle Cloud: Oracle Integration Cloud (OIC/ICS), Oracle ERP Cloud, Oracle Fusion SCM Cloud, VBCS, Oracle ATP, OCI, ORDS, BI Publisher (BIP)

Integration & APIs: REST APIs, SOAP Web Services, FBDI, SFTP, OIC File Server, file-based integrations, orchestration, mappings, lookups, callbacks, exception handling and monitoring

Database & Development: SQL, PL/SQL, packages and functions, Oracle JET, JavaScript, Java, MySQL, PostgreSQL

Delivery & Support: requirements analysis, technical specifications, low-level design, unit testing, SIT, UAT, SDLC, deployment, incident resolution, production and post-implementation support

Tools: Postman, Git, Docker

EXPERIENCE

Associate Technical Consultant

Jan 2025-Present

Innovage Cloud

Ahmedabad, Gujarat

- Design, develop, unit test and support OIC integrations and VBCS applications for Oracle ERP/Fusion Cloud across Finance and SCM use cases using REST, SOAP, FBDI, SFTP and file-based patterns.
- Translate business requirements into technical specifications, low-level designs, interface mappings, test scenarios and deployment guides; collaborate with functional consultants and client stakeholders throughout the SDLC.
- Develop SQL and PL/SQL packages/functions and expose data services as REST APIs through ORDS on Oracle ATP/OCI; tune queries and application flows to improve response time and processing efficiency.
- Use BI Publisher (BIP) reporting capabilities for Oracle Cloud data extraction, reporting and interface validation; support Oracle ERP Cloud Financials and Fusion SCM integration data flows.
- Implement reusable callbacks, error handling, notifications and integration monitoring; support SIT, UAT, deployment, production stabilization, incident resolution and post-implementation maintenance.

PROJECTS

SILAL - OIC / FUSION SCM INTEGRATIONS

Technologies: OIC, Oracle Fusion SCM Cloud, WMS, Oracle ATP, OCI, REST APIs, SOAP Web Services, SQL, PL/SQL

- Designed, developed and supported OIC integrations connecting Oracle Fusion SCM Cloud, WMS and external enterprise systems across Inventory, Purchasing, Order Management, Shipping, Receiving and warehouse operations.
- Built REST- and SOAP-based interfaces for item master, inventory, purchase orders, sales orders, shipments and inventory movement data, using OIC orchestration, mapper, lookup tables and secure authentication.
- Implemented transformation logic, exception handling, error notifications and monitoring to improve reliable master-data and transaction synchronization across SCM and WMS applications.
- Used Oracle ATP/OCI and SQL/PLSQL for integration data validation and downstream processing; supported performance optimization and timely issue resolution.
- Gathered requirements with functional teams and business stakeholders; prepared technical design and deployment documentation and supported SIT, UAT, go-live and production stabilization

OES AUTOMATION

Technologies: OIC, Oracle ERP Cloud Financials, VBCS, Oracle ATP, ORDS, REST, SOAP, FBDI, SFTP, SQL, PL/SQL

Solution 1 - Customer Receipts

- Developed a VBCS solution to process bank transactions and analyze narration data, automatically classifying transactions for customer receipt creation or General Ledger processing with filters for business unit, bank, account and date range.
- Integrated OIC with Oracle ERP Cloud Financials using SOAP services for receipt creation and FBDI for journal uploads; enabled multi-select handling and controlled updates to receipt methods, customer accounts and sites.
- Collaborated with functional consultants on validation and testing, supported UAT and deployment, and provided post-production issue resolution.

Solution 2 - Finance Automation

- Built VBCS screens to process daily ticket data received through SFTP, apply Excel-based revenue-allocation logic, filter operational data and initiate invoice and GL creation from the user interface.
- Implemented OIC flows using FBDI for standard invoice creation and REST APIs for credit invoices, automating Oracle ERP Cloud financial transactions and reducing manual accounting effort.
- Applied interface validation, exception handling and monitoring to support reliable scheduled processing and business testing.

Solution 3 - Reconciliation

- Developed PL/SQL reconciliation logic to consolidate and validate revenue for 10+ attractions across operational reports, settlements and bank data, supporting accurate matching and variance identification.
- Built OIC file-based integrations and a dynamic VBCS interface with adaptive columns and advanced filters; used ATP and ORDS REST services for structured downstream processing, query and reporting access.
- Supported unit/SIT/UAT execution, deployment and production stabilization while documenting solution behavior and issue-resolution procedures.

Cross-solution delivery: requirements analysis, technical documentation, unit/SIT/UAT testing, deployment, monitoring, production support and post-implementation issue resolution.

EDUCATION

Bachelor of Technology in Information Technology
Dharmsinh Desai University (DDU) - CGPA: 7.63/10

May 2021-May 2025
Nadiad, Gujarat
